

Ramsar Information Sheet

Published on 17 April 2018

Update version, previously published on: 15 December 2014

Norway Stabbursneset

Designation date 24 July 1985 Site number 312

Coordinates 70°09'47"N 24°56'33"E

Area 1 568,00 ha

https://rsis.ramsar.org/ris/312 Created by RSIS V.1.6 on - 8 May 2020

Color codes

Fields back-shaded in light blue relate to data and information required only for RIS updates.

Note that some fields concerning aspects of Part 3, the Ecological Character Description of the RIS (tinted in purple), are not expected to be completed as part of a standard RIS, but are included for completeness so as to provide the requested consistency between the RIS and the format of a 'full' Ecological Character Description, as adopted in Resolution X.15 (2008). If a Contracting Party does have information available that is relevant to these fields (for example from a national format Ecological Character Description) it may, if it wishes to, include information in these additional fields.

1 - Summary

Summary

Stabbursneset is the most important part of the wetland area in the inner part of the Porsanger fjord, considered one of the most important wetlands in Fennoscandia. The Site consists partly of a river delta including shallow marine waters, sand banks exposed at low tide, saltmarshes and wet mires. Here, one can find large well-developed salt meadows with Arctic plant species and communities. The Valdak marshes in the southern end of the Site are internationally important staging, feeding and moulting areas for several species of waterfowl. Many migrating species of ducks, geese and waders stage here, and this is the most important staging site for the lesser white-fronted goose in Northern Europe. The most numerous bird species occurring at the Site are the red knot (up to 20 000 ind.) and the common eider (up to 5 600 ind.). Additionally, the river Stabburselva is important for Atlantic salmon and is being used for sport fishing. There is also an information center close to the Site and strict regulations prevent hunting and camping during sensitive times.

2 - Data & location

2.1 - Formal data

2.1.1 - N	lame and	address	of the	compiler	of this	RIS
-----------	----------	---------	--------	----------	---------	-----

Compiler 1

Name	Pernille Kvernland
Institution/agency	Norwegian Environment Agency
Postal address	Post box 5672 Torgarden, N-7485 Trondheim, Norway
E-mail	post@miljodir.no
Phone	+47 73580500

2.1.2 - Period of collection of data and information used to compile the RIS

From year 1983

To year 2017

2.1.3 - Name of the Ramsar Site

Official name (in English, French or Spanish)

Stabbursneset

2.1.4 - Changes to the boundaries and area of the Site since its designation or earlier update

(Update) A Changes to Site boundary Yes O No ⊚

(Update) B. Changes to Site area No change to area

2.1.5 - Changes to the ecological character of the Site

(Update) 6b i. Has the ecological character of the Ramsar Site (including applicable Criteria) changed since the previous RIS?

2.2 - Site location

2.2.1 - Defining the Site boundaries

b) Digital map/image

<1 file(s) uploaded>

Former maps 0

Boundaries description

The boundaries are the same as of the Stabbursneset Nature Reserve.

2.2.2 - General location

a) In which large administrative region does the site lie?

Finnmark

b) What is the nearest town or population centre?

Lakselv, approx pop. est. 2 500 (2013)

2.2.3 - For wetlands on national boundaries only

a) Does the wetland extend onto the territory of one or more other countries?

b) Is the site adjacent to another designated Ramsar Site on the territory of another Contracting Party?

2.2.4 - Area of the Site

Official area, in hectares (ha): 1568

Area, in hectares (ha) as calculated from 1563.73 GIS boundaries

2.2.5 - Biogeography

Biogeographic regions

Regionalisation scheme(s)	Biogeographic region
EU biogeographic regionalization	2. Alpine
Other scheme (provide name below)	1. Northern boreal zone (NbOC – transitional section)

Other biogeographic regionalisation scheme

1. Zonal division showing the variation in vegetation from south to north and from the lowlands to the mountains, and sectional graduation showing the variation between the coast and inland (In: Moen, A. 1998. Nasjonalatlas for Norge; vegetasjon. Statens kartverk, Hønefoss). 2. Biogeographical regions of Europe, European Environment Agency, 2005

3 - Why is the Site important?

3.1 - Ramsar Criteria and their justification

1	Criterion 1	: Re	epresentative,	rare	or unio	que natural	or nea	ar-natural	wetland	types
---	-------------	------	----------------	------	---------	-------------	--------	------------	---------	-------

The Site is an Arctic wetland system dominated by a river delta and large mudflats exposed during low Other reasons tide. The area also has one of the largest salt- and brackish marshes in northern Norway. The mudflats and marshes create an area unusually rich in birds.

- ☑ Criterion 2 : Rare species and threatened ecological communities
- ☑ Criterion 4 : Support during critical life cycle stage or in adverse conditions
- ☑ Criterion 5 : >20.000 waterbirds

Overall waterbird numbers	25 000 +
Start year	2005
Source of data:	Artsdatabanken.no

- ☑ Criterion 6 : >1% waterbird population
- ☑ Criterion 8 : Fish spawning grounds, etc.

The river Stabburselva is one of the most important rivers for the Atlantic salmon in the county, and it also has vital populations of the sea trout and the Arctic char.

3.2 - Plant species whose presence relates to the international importance of the site

<no data available>

3.3 - Animal species whose presence relates to the international importance of the site

Fish, Mollusc	and Crustacea	'												
CHORDATA/ ACTINOPTERYGI		Silver salmon												Criterion 8: The river Stabburselva is one of the most important rivers for Atlantic salmon in the county. The species wander up the river in order to spawn.
CHORDATA/ ACTINOPTERYG		Herling								LC Sign				Criterion 8: The species wander up the Stabburselva river in order to spawn.
CHORDATA/ ACTINOPTERYGI	Salvelinus alpinus alpinus	Char												Criterion 8: The species wander up the Stabburselva river in order to spawn.

¹⁾ Percentage of the total biogeographic population at the site

Further explanation - lesser white-fronted goose: The lesser white-fronted geese that stage in Valdakmyra comprise the majority of the remaining population in Fennoscandia. They were previously a common breeding bird in the mountains of Northern Norway, but today they nest only in a few places in Finnmark. The reason for the sharp decline in the population is associated with hunting of the species along some of its migratory routes to their wintering grounds. The lesser white-fronted geese arrive at the Valdak marshes in the middle of May and leaves for their breeding grounds in the first half of June. After the breeding season, they come back here in the second half of August and leave for their wintering grounds in the first half of September.

Further explanation - bar-tailed godwit: Criterion 6 is not met but it is very close with up to 1000 ind., and the required 1% threshold at 1 200 ind. Biogeographic region: Northern Europe/Western Europe.

Capitalized letters shows the species' status on the National Red List 2015.

3.4 - Ecological communities whose presence relates to the international importance of the site

RIS for Site no. 312, Stabbursneset, Norway

4 - What is the Site like? (Ecological character description)

4.1 - Ecological character

A large headland made up of glacifluvial deposits from the river Stabburselva, mostly in the early postglacial period. Below the headland some of the largest salt- and brackish marshes in Northern Norway are situated, with international importance as resting and feeding area for many species of migrating wetland birds. The reserve is also an important moulting area for many species of ducks and an important winter habitat, especially for common eider. The vegetation reflects the special ecological conditions in the zone where land and sea meet and large areas with sea meadow with salt tolerating plants is dominating.

4.2 - What wetland type(s) are in the site?

Marine or coastal wetlands

Wetland types (code and name)	Local name	Ranking of extent (1: greatest - 4: least)	Area (ha) of wetland type	Justification of Criterion 1
A: Permanent shallow marine waters		3		
E: Sand, shingle or pebble shores		4		
F: Estuarine waters				
G: Intertidal mud, sand or salt flats		1		Representative
H: Intertidal marshes		2		Representative

Inland wetlands

Wetland types (code and name)	Local name	Ranking of extent (1: greatest - 4: least)	Area (ha) of wetland type	Justification of Criterion 1
Fresh water > Marshes on peat soils >> U: Permanent Non- forested peatlands				

4.3 - Biological components

4.3.1 - Plant species

Other noteworthy plant species

Scientific name	Common name	Position in range / endemism / other
Carex mackenziei	Mackenzie Sedge	Of special interest are large areas with pools dominated by Mackenzie Sedge.
Hippuris tetraphylla	Four-leaved Mares Tail	Of special interest are large areas with pools dominated by this species.
Potamogeton alpinus	Alpine pondweed	Of special interest are large areas with pools dominated by this species.
Puccinellia phryganodes	Creeping Alcali Grass	In large areas the vegetation is dominated by Creeping Alcali Grass.

4.3.2 - Animal species

<no data available>

4.4 - Physical components

4.4.1 - Climate

Climatic region	Subregion
D: Moist Mid-Latitude	Dfc: Subarctic (Severe winter, no dry season, cool
Cilitate with cold winters	summer)

Oceanic and Alpine climates dominate, with long and relatively mild winters. The area is arid with an annual precipitation of approx. 500 mm.

4.4.2 - Geomorphic setting

Unknown

4.4.8 - Dissolved or suspended nutrients in water

Unknown 🗹

Please provide further information on dissolved or suspended nutrients (optional):

The river holds drinking water quality, but for the very low population in the area, this is a non-restricted resource.

4.4.9 - Features of the surrounding area which may affect the Site

Please describe whether, and if so how, the landscape and ecological characteristics in the area surrounding the Ramsar Site differ from the i) broadly similar O ii) significantly different O site itself:

Surrounding area has greater urbanisation or development

Surrounding area has higher human population density \square

Surrounding area has more intensive agricultural use

Surrounding area has significantly different land cover or habitat types

Please describe other ways in which the surrounding area is different:

A major part of the catchment area to the river Stabburselva has the status as a National Park or Landscape Protected Area.

4.5 - Ecosystem services

4.5.1 - Ecosystem services/benefits

Provisioning Services

Ecosystem service	Examples	Importance/Extent/Significance
Food for humans	Sustenance for humans (e.g., fish, molluscs, grains)	Medium

Cultural Services

Ecosystem service	Examples	Importance/Extent/Significance
Recreation and tourism	Recreational hunting and fishing	High
Recreation and tourism	Picnics, outings, touring	Medium
Recreation and tourism	Nature observation and nature-based tourism	Medium
Scientific and educational	Major scientific study site	Medium
Scientific and educational	Educational activities and opportunities	Medium
Scientific and educational	Long-term monitoring site	Medium

Other ecosystem service(s) not included above:

The river Stabburselva is a well known and important river for sports fishing activities. The river is known for its big salmons with weights up to 29 kg.

The area is to a low degree used for bird watching.

Monitoring of bird populations continues (Norwegian Institute for Nature Research and Norwegian Ornithological Society).

A local Visitors Centre, Stabbursnes Naturhus og Museum, is situated close to the reserve. Information brochures are available and a booklet with information regarding the area can also be bought here. Many visit the area to explore the world's northernmost pine forest. Guided tours are possible. A nature trail and information posters have also been established.

Have studies or assessments been made of the economic valuation of ecosystem services provided by this Ramsar Site?

4.5.2 - Social and cultural values

i) the site provides a model of wetland wise use, demonstrating the application of traditional knowledge and methods of management and use that maintain the ecological character of the wetland

ii) the site has exceptional cultural traditions or records of former $\hfill\Box$ civilizations that have influenced the ecological character of the wetland

iii) the ecological character of the wetland depends on its interaction with local communities or indigenous peoples $\hfill\Box$

iv) relevant non-material values such as sacred sites are present and their existence is strongly linked with the maintenance of the ecological character of the wetland

4.6 - Ecological processes

<no data available>

5 - How is the Site managed? (Conservation and management)

5.1 - Land tenure and responsibilities (Managers)

5.1.1 - Land tenure/ownership

	wners	

Category	Within the Ramsar Site	In the surrounding area
National/Federal	✓	✓
government		

Private ownership

Category	Within the Ramsar Site	In the surrounding area
Other types of private/individual owner(s)	/	/

Provide further information on the land tenure / ownership regime (optional):

Within the Ramsar site: Partly private.	
In the surrounding area: Partly private.	

5.1.2 - Management authority

Please list the local office / offices of any	County Governor of Finnmark
agency or organization responsible for	
managing the site:	
Postal address:	Fylkesmannen i Finnmark, Miljøvernavdelingen, Statens Hus, 9815 Vadsø.
E-mail address:	postmottak@fmfi.no

5.2 - Ecological character threats and responses (Management)

5.2.1 - Factors (actual or likely) adversely affecting the Site's ecological character

Please describe an	vother threats	(ontional)	ı.

Within the Ramsar site: Not known	
In the surrounding area: Not known	

5.2.2 - Legal conservation status

National legal designations

Tradiction logar decignations			
Designation type	Name of area	Online information url	Overlap with Ramsar Site
nature reserve	Stabbursneset		whole

5.2.3 - IUCN protected areas categories (2008)

la Strict Nature Reserve
lb Wilderness Area: protected area managed mainly for wilderness protection
II National Park: protected area managed mainly for ecosystem protection and recreation
Ill Natural Monument: protected area managed mainly for conservation of specific natural features
IV Habitat/Species Management Area: protected area managed mainly for conservation through management intervention
V Protected Landscape/Seascape: protected area managed mainly for landscape/seascape conservation and recreation
VI Managed Resource Protected Area: protected area managed mainly for the sustainable use of natural ecosystems

5.2.4 - Kev conservation measures

Legal protection

20ga: p. 01001011			
	Measures	Status	
	Legal protection	Implemented	

Human Activities

Measures	Status
Regulation/management of recreational activities	Implemented

Other

The area was established as a National Nature Reserve the December 16th 1983 and was given status as Ramsar area the 24th of July 1985. The watercourse is to a great extent intact and is by its placement in

protection plan I (Verneplan I) given the highest protection against exploration of the hydroelectric power resources. The conservation area is included in a planned larger marine conservation area Indre Porsangerfjord.

To protect the lesser white-fronted goose, all traffic is prohibited in one part of the area (the Valdak marshes) from 1st May until 30th June, and from 10th August until 20th September. Hunting,

dog training, camping or camouflage installations are prohibited.

The area is by a Royal Decree given the status as a National Nature Reserve, which is the strongest form of Nature conservation in Norway. All kind of human activity in the conservation area is regulated by an official set of detailed regulations specific for the area.

5.2.5 - Management planning

Is there a site-specific management plan for the site? No

Has a management effectiveness assessment been undertaken for the site? Yes O No

If the site is a formal transboundarysite as indicated in section Data and location > Site location, are there shared management planning Yes O No opprocesses with another Contracting Party?

Please indicate if a Ramsar centre, other educational or visitor facility, or an educational or visitor programme is associated with the site:

A local Visitors Centre, Stabbursnes Naturhus og Museum, is situated close to the reserve. Information brochures are available and a booklet with information regarding the area can also be bought here.

A nature trail and information posters has also been established.

5.2.6 - Planning for restoration

Is there a site-specific restoration plan? No need identified

5.2.7 - Monitoring implemented or proposed

Monitoring	Status
Birds	Implemented

Monitoring of bird populations continue (Norwegian Institute for Nature Research and Norwegian Ornithological Society).
